

Good afternoon,

Thank you for attending the walkthrough yesterday (10/4/16) and for your interest in the project. The three attendees in attendance were:

KGL Landscape
John A. Brown Excavation
Henniker Sewer and Drain

There were some questions at the meeting, and an addendum will be posted on the town website later today for the following:

- 1) The work will include installation of the 4" waste pipe through the building foundation and cap off in the basement for connection to the interior plumbing by others
- 2) Electrical power will be supplied to a new junction box at the corner of the building ramp near the septic tank by others. Control and alarm panel wiring shall be included in this RFP.
- 3) The town will have the propane supplier move the two LP tanks to the asphalt pad around the back corner of the building and away from the area to be excavated
- 4) The septic tank and pump chamber shall be designed to H-20 loading instead of HD.
- 5) Manhole risers from the septic tank and pump chamber shall be 4' diameter concrete
- 6) Three risers from each of the septic tank and pump chamber shall be required, located at the inlet and outlet ends.
- 7) All pump fittings shall be quick-disconnect cam-lok style
- 8) Vents from the leach field shall be run to and up the back (cemetery side) of the parking area light pole
- 9) Disturbed garden areas shall be backfilled to grade with 6" layer of topsoil. Any plantings to be saved shall be done by others.
- 10) Disturbed areas of the gravel lot shall be backfilled to grade with 6" of crushed gravel and compacted. Disturbed grassy areas shall be loamed and seeded.
- 11) The pipe from the distribution box to the leach field shall be 4" SDR 35 instead of schedule 40 PVC.

If you have any other questions, the deadline for them is Friday at 1pm. I will issue another addendum if there are further changes. Please acknowledge receipt of this email.
