

Please note that springtime repair to potholes has begun. We use a method called "mill and fill" where the pothole and some of the surrounding pavement is milled out and a permanent hot pavement patch is installed. This is much more effective and long lasting than the "cold patch" and nitpack patching that we are forced to use during the winter months. Interestingly enough, this winter had several freeze/thaw cycles and was the equivalent of three (3) winters than just one (1) when it comes to the damage to the roads.

If you see a pothole in need of repair, feel free to call our office at 497-8990 ext 200 or by submitting a [Work Order Request](#) online. If no one is available, you can leave a message with the location and nearest house/business number. Don't forget to leave your name and number in case we need to call you back to verify the location.

Work is scheduled Tuesday thru Friday for several weeks from 7am - 4:30pm. DPW will focus on main roads first and then move to side roads as needed. Expect traffic disruptions. Thank you for your patience.
